N=5000 sensitivity (kept separate from the primary N≤4000 heatmaps)
4.5-Mbp primary N=5000: structurally infeasible (246 seed×divergence records); never encoded as zero.
productive searches (%)
predecessor visits avoided (%)
measured arm
5.625-Mbp N=5000 arm (default occurrence filter)
avoided visits per check
Run₄ fast batches / loop evaluations (%)
nominal query divergence (%)
nominal query divergence (%)
Lines are across-seed medians, shading is IQR, and dotted lines are minima/maxima. Source SHA-256 b1d2660ef90a...
