DP score distributions: mean exact-score counts across 6 generated inputs
mean exact-score count
min_sc=40
nominal divergence 0%
nominal divergence 5%
nominal divergence 10%
N=200
N=4000
mean anchors at exact score
mean anchors 36,134
697 occupied scores · 6 inputs
mean anchors 15,868
332 occupied scores · 6 inputs
mean anchors 6,701
157 occupied scores · 6 inputs
mean anchors 722,667
697 occupied scores · 6 inputs
mean anchors 317,334
332 occupied scores · 6 inputs
mean anchors 134,000
157 occupied scores · 6 inputs
chain-ending DP score, fᵢ
Each point is the arithmetic mean of 6 exact integer score-bin counts, including zeros, so the points sum to the mean anchor count.
No score-width binning is applied. Absent exact scores are blank; the count axis is logarithmic. Source SHA-256 b1d2660ef90a...
